

# Distance Learning

**By Nathan Prange**

---

---

# The Problem

- Some may say that distance learning can cut the productivity because the teacher is not there at all times.
  - People also might not want teachers to focus too much on technology.
-

---

# Related Terms

- Distance lab: is a classroom where the teacher is broadcast on the television to teach the class.
  - Internet Classes: Internet classes are classes where the student does all work on the internet and has little contact with a teacher.
-

# Distance Lab

- Area of impact: Education.
- An example could be a language class were the teacher is not always in the classroom.
- Distance learning started back in 1700's and some people have always worried that the students would not be as productive.

---

# Distance Lab

- The stakeholders are the students and the Teachers.
  - Benefits: A distance learning classroom can hold a class not otherwise possible.
  - Concerns: Some students and parents want a teacher in the class at all times.
  - New distance labs are much better equipped for teaching and are more productive.
-

---

# Internet Classes

- Area of impact: Education
  - Issue: In an internet class the student has little contact with a teacher.
  - Beginning: Shortly after the internet was invented people started posting lessons and holding online classes.
  - The stakeholders are the students and teachers.
-

---

# Internet classes

- Benefits: An internet class can be much more flexible in time than a regular class.
  - Concerns: There are people who think it is necessary to be in contact with a teacher at all times.
  - Improvements: New online courses can be much more interactive than old ones.
-
